

DIRTT Flex Gas future proofs patient care

Englewood Hospital had built with DIRTT before. So, when they needed to create a temporary intensive care unit (ICU), teaming up again was a no-brainer. Especially since DIRTT could solve a bunch of their design challenges. These rooms had to match the other wings in the hospital. No problem. High-tech, factory-built pre-fab delivers unmatched consistency. Next, ICU rooms use twice as much medical gas as a typical patient-care room. OK. DIRTT Flex Gas is a quick-connect solution that installs easy. It cuts down labor costs and accelerates schedule.

But here's the kicker. When Englewood opens their permanent ICU and converts the temp space back to a regular med-surg room, the Flex Gas lives up to its name.

Extra hoses can be removed and re-used as needed. Durable wall panels can be updated for a fraction of the cost of redoing the drywall. And it's quick and clean. Turning these rooms over will take days, not weeks. No drywall dust. No surprises. Just exceptional patient care.
