

### Building capacity and peace of mind

Part of the Fraser Health Authority, Eagle Ridge is a community hospital that delivers a range of patient care. Their holistic approach offers immediate service in their emergency room and future support through rehabilitation. They also brought a holistic approach when they set out to expand and renovate their emergency department. Eagle Ridge wanted an update today that also worked for them in the years to come.

When Fraser Health looked at DIRT they saw more than just medical-grade finishes that increase infection prevention and control. They saw an opportunity to save time and money on future operational expenses. DIRT modular solutions offer easy access to the wall cavity.

Integrated technology

WriteAway™

That means maintenance and adjustments can be done quickly and cleanly. Instead of closing down entire departments for days to make changes, they can update one room in a couple of hours. So, while distraction graphics improve the patient experience in the diagnostic cardiology lab and durable wall panels prevent infection from spreading in the infusion bays, they also offer peace of mind. Now, while Eagle Ridge staff takes care of their patients, they have a space that takes care of them too.

I love coming to work in this space. It's not like any other place in the hospital. People actually feel uplifted when they come in for treatment which makes my job easier.
